SEARCHINFORM

OUR MISSION

To ensure the information security and operational stability of every business we protect.

OFFER THE BEST

Our aim is to provide every business with a comprehensive toolkit for controlling the widest range of internal threats. Our clients receive not only expert guidance, but also full-scale outsourced support from our team.

OPEN FOR COOPERATION

Experience our solutions firsthand with fully functional trial versions. Request your free trial by contacting your manager or visiting searchinform.com

CLIENTS ARE ON THE TEAM

When developing new features and products, SearchInform conducts research among its clients to gain valuable business insights. The cost of additional development is estimated with careful consideration of the preferences and needs of all client groups.

SEARCHINFORM HISTORY

SEARCHINFORM PRODUCTS

The SearchInform product line includes six solutions designed to ensure comprehensive control and proactive prevention of insider risks across all levels of a company's information system:

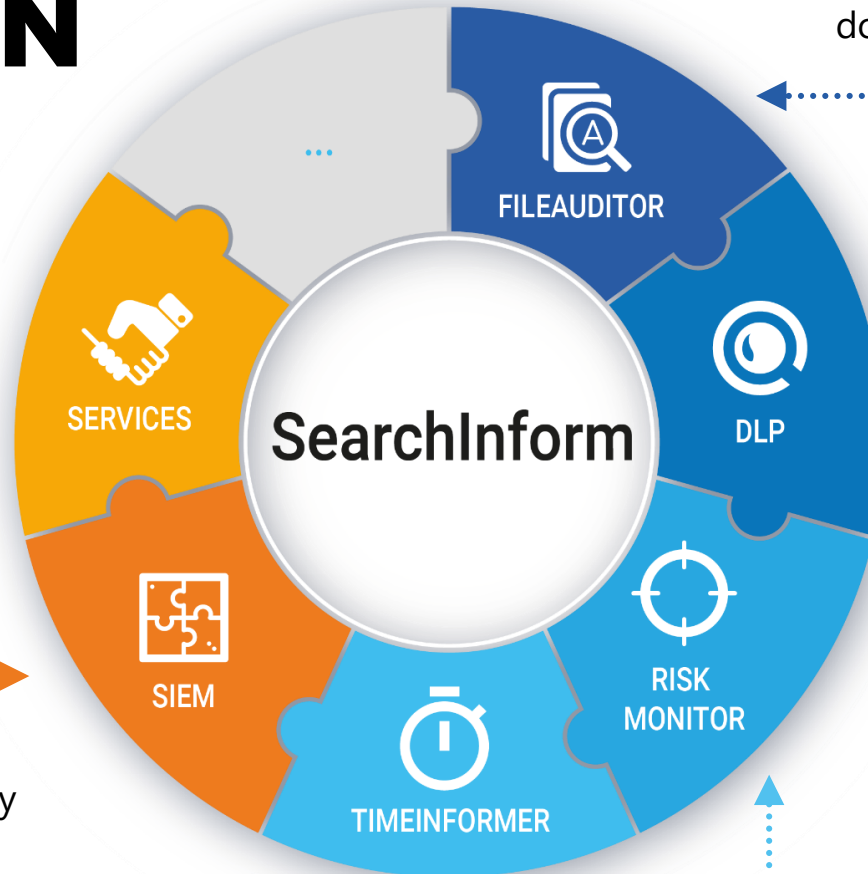

- ▶ **SearchInform DLP** – Data protection at the workstation level and control of data channels.
 - ▶ **FileAuditor (DCAP)** – Data-at-rest protection, e-discovery, and data classification.
 - ▶ **Risk Monitor** – Next-generation DLP with investigation tools and insider threat protection.
 - ▶ **SIEM** – Control and analysis of the entire IT infrastructure.
- +
- TimeInformer** – Employee activity monitoring and productivity analysis.
- ProfileCenter** – Personality and behavior analytics for risk assessment and HR insights.

SEAMLESS PRODUCTS INTEGRATION

MSSP. We provide the software and analysts, the customer gets the result.

SearchInform SIEM processes information, detects anomalous events in a company's workflow and alerts about threats in real time.

TimeInformer monitors employees' activity keeping track of which applications and websites are used during work hours, who uses them and for how long.

DCAP solution obtains total visibility and keeps track of any operation on sensitive data, classifies content and makes sure identified documents comply with regulations.

DLP system protects data in motion and prevents data leakages in all data transfer channels.

Risk Monitor ensures ongoing or retrospective comprehensive investigation covering all channels and employees to identify the involved in a policy violation. The system performs control of harmful human behavior – detects suspicious activity before an incident happens.
